Kurita's Contribution at IDA World Congress 2019:

- ✓ Lecture about Kurita's solutions for waste-water reclamation
- ✓ Optimized combination of chemicals and facility

About the IDA World Congress: Crossroads to Sustainability

The world's most anticipated and prestigious desalination and water reuse event.

IDA:

International Desalination Association. A non-profit association that serves more than 2,600 core members in 60 countries and reaches an additional 4,000 affiliate members.

About Kurita's Presentation

Presentation Title:

New All Membrane System For Waste-Water Reclamation

Session Information:

RO Membrane Innovation

Presenter:

Koji Nakata, Kurita Water Industries Ltd.

Abstract:

A standard wastewater reclamation system composed of UF membrane and RO membrane has been developed. The system was applied to wastewater reclamation by optimized appropriate functional materials: coagulant, cationic polymer, scale dispersant, and membranes. It turns out that it operates with stable treatment and high water recovery rate. Furthermore, compared with conventional systems, it significantly superior in terms of installation space, initial and running cost. As an example, the system for recovering fluorine drainage can stably operate for more than half a year without CIP maintenance.
